

Calibration Standards for EN 14538: The Elemental Analysis of Calcium and Magnesium in Biodiesel

DCG has available a calibration standard for **EN 14538**. This test method is used to determine the Calcium and Magnesium content in Biodiesel. These standards are N.I.S.T. traceable by weight and are analyzed to assure quality. Custom standards are available upon request.

Calcium and Magnesium are alkaline metals found in the catalyst used to manufacture Biodiesel. Residual alkaline metals can form deposits on fuel injection systems and poison emission control systems.

Part #: DCGUOP389:

Calcium (Ca) and Magnesium (Mg) at 100 ppm by weight packaged in a 100 ml. bottle.
